Multidisciplinary Approach to Implant Prosthodontics

A comprehensive prosthetic training program for the successful and predictable restoration of dental implants.

Successful implant therapy involves a delicate balance between soft tissue, hard tissue, and an aesthetic and functional prosthetic component. This course will look at each of the following aspects for the provision of dental implants for your patients from the unique perspectives of periodontics, oral surgery and prosthodontics. This course includes traditional lectures covering the didactic materials, as well as a treatment planning session. The course hours include 35 hours of prosthetic instruction and 14 hours of surgical instruction.

Learning Objectives:

By the end of this course, attendees will be familiar with:

- Case Selection
- Biological Basis Of Osseointegration
- Pre-treatment Protocols
- Surgical Treatment
- Post-Surgical/Pre-Prosthetic Assessment
- Prosthetic Treatment
- Long-term Follow-up And Maintenance
- Management Of Complications
- Record Keeping
- Effective Dental Team Communication
- Effective Patient Communication

Target Audience: This course is intended for dentists.

" One of the best courses I have ever taken in my 20 years of practicing. The chemistry between all the presenters is a delight to see. Just to see them brainstorming certain scenarios on the spot was a great learning experience. Thank You!"

- Dr. Dan I. Haas
